### Santiago Ramón y Cajal: The Beginnings of Modern Neuroscience

Learn about the first person to describe the nervous system, including intricate neurons, in exquisite and artistic detail was Santiago Ramón y Cajal.  
Building 31

## Joseph Goldberger & the War on Pellagra

Dr. Joseph Goldberger discovered the cause of pellagra, a disease that killed many poor Southerners in the early part of the 20th century. His finding that pellagra was caused by a diet deficient in vitamin B was met by political and social resistance.

## Pretty Patches

Because employees designed these patches, they reveal how people thought about their work at the Clinical Center—sometimes as a heroic struggle and sometimes with humor.

Building 10, 1st floor, near the hospitality desk.

## Howard Bartner & 40 Years of Medical Illustration

Howard Bartner, an NIH medical illustrator, devoted 40 years to portraying human anatomy in his drawings.
